SWISSPEARL

Located on the waterfront in Den Oever, Havenzicht is a traditional fish restaurant that draws inspiration from the rich maritime heritage of this historic fishing village. The building's authentic architecture and welcoming appearance make it a natural fit within its coastal setting, offering guests a place to enjoy local seafood with views of the harbour.

For the façade, Swisspearl Plank Original was selected to achieve the desired traditional aesthetic while ensuring long-term performance. The carefully chosen colours complement the character of the waterfront location, while the wood-look finish provides the warmth and charm of natural timber cladding. Installed in a classic overlapping weatherboard style, the façade reinforces the building's maritime identity and craftsmanship.

In addition to its visual appeal, Swisspearl Plank Original offers a low-maintenance alternative to traditional timber, making it particularly suitable for the demanding conditions of a coastal environment. The result is a durable and attractive façade that combines the timeless appearance of wood with lasting quality and ease of maintenance.
