# SWISSPEARL CARAT SL

## SWISSPEARL CARAT SL

**CARAT SL** panels have a coloured through core with a transparent or pigmented top finishing shade in shade. The unique natural look and the timeless beauty of the monolithic material with its delicate vein texture provide an exciting and noble expression to buildings with special character.

Available in a wide spectrum of complementary shades, **CARAT SL** is just the top of the line façade solution to create contrasts and spectacular effects or to blend harmoniously into the surrounding settings.

# SWISSPEARL REFLEX

## SWISSPEARL REFLEX

Also with an integrally coloured core, these high tech panels bear an iridescent surface finishing on pure acrylic base. Changing lighting and angle of vision produce fascinating nuances in the colours.

These directional panels come in 14 shades; they are particularly suited for contemporary buildings of any size and scope with a very modern architecture.

Wherever in the world!

# SWISSPEARL XPRESSIV

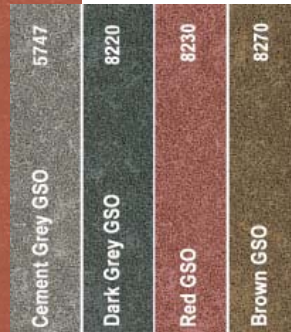

## SWISSPEARL XPRESSIV

The latest panel generation with a very vivid texture was designed to give a unique touch to the façades, regardless of their size.

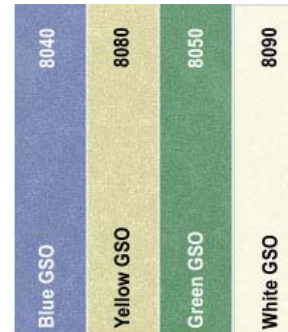

Soon available in 8 colours.

Shades Cement Grey, Dark Grey, Brown and Red are provided as coloured through panels, the other 4 shades are upgraded with a pigmented translucent surface coating.

Of course the authentic and sober material has the same excellent behaviour and long durability as all the other panels of the Swiss Collection.

Available on request as of the end of 2008

COATED ON BOTH SIDES

## PANELS COATED ON BOTH SIDES

Any panel may be finished on both sides, either in the same or a different colour, with the same or a different type of coating.

Typical applications are panels for balconies (minimum thickness: 12 mm, 15/32"), partition walls partly visible from the other side, windbreaker panels, sliding shutters, louvers, etc.

Additional customised treatment such as perforations, etc. are, of course, also possible.

# PERFORATIONS

## SWISSPEARL PERFORATIONS

Holes, slots and other shaped perforations allow very unusual effects to express the architect's individual vision of his building.

Perforated panels may have a function (sliding shutters, wind-screens, separation, sound absorption, etc.), or be purely decorative.

They may be used individually or in combination together with plain SWISSPEARL panels in the same or different shades or with other materials.

Perforations (minimum 20 mm) are normally chamfered, which provides an outstanding finishing quality.

See Design + Installation Manual for restrictions in design possibilities.

## FAÇADE SYSTEMS WITH SECRET FIXING

The façade systems **SIGMA 8** and **12** are designed for applications with the highest standards regarding sophisticated presentation. Available in all the aesthetically unique colour ranges **CARAT**, **REFLEX** and **XPRESSIV**, up to a maximum effective panel size of  $3048 \times 1220$  mm, **SIGMA** panels are only supplied factory cut and drilled to ensure highest quality control.

The specially engineered system **SIGMA 8** combines the large size **SWISSPEARL** panels in thickness 8 mm (5/16") and a patented, very clever secret fixing concept that allows a wide scope for individual expression with usual sub framing.

For the **SIGMA 12** system 12 mm thick panels are attached from the backside with under cut anchors and cleats to hanging rails.
