General information

The various colors harmonize the unique character of the Swisspearl panels to be expressed in an almost endless diversity. The carefully chosen full-body color and color finishes, each in their own way, emphasize the unmistakable aesthetics of the material combined with material and color to form a single whole.

**CARAT**
Coral panels are integrally colored with a transparent highly pigmented acrylic top finish shade in shade. Coral HR is a special surface treatment which offers an increased scratch resistance and higher UV resistance. Furthermore, most graffiti can be removed using acetone. Generally the aspect resembles the Coral finish, whereas HR panels have a slight sheen to the surface. Coral and HR panels can be used on the same elevation, possibly with a separation in between.

**CARAT HR**
Carat -HR is a special surface treatment which offers an increased scratch resistance and a higher UV resistance. Furthermore, most graffiti can be removed using acetone. Generally the aspect resembles the Carat finish, whereas HR panels have a slight sheen to the surface. Carat and HR panels can be used on the same elevation, possibly with a separation in between.

**AVERA**
Avers are integrally colored fiber cement panels with a vibrant texture never seen before.

**INCOIRA**
The innovative Incora façade panel stands out through a vivid spreading pattern, generated through granulated marble. Differences in the textural appearance and color tone between the individual panels are a natural aspect of the Incora product characteristics and also highlight the vibrancy of the material expressiveness of the façade.

**REFLEX**
These panels are directional, integrally colored and have an indecisive surface coating which is purely acrylic. Changing lighting and angles of vision produce amazing nuances in color shades.

**TEXIAL**
The fine surface structure gives the appearance of a fabric and is always one of a kind because it is embossed by hand.

**NOBILIS**
The semi-translucent surface coating on a pure acrylic basis provides the classic fiber cement appeal with much visual depth to it.

**NOBILIS HR**
Nobilis HR is a special surface treatment which offers an increased scratch resistance and a higher UV resistance. Refer to Carat HR above to read more details.

Detailed specifications please refer to our DIM (Design and Installation Manual) or contact one of our dedicated Technical Advisors.

The printed colors may differ from the original shade of the color. To see the exact color and when matching up colors on adjacent parts of a building one must use the original panel samples.

The natural ingredients used in the fiber cement panels will to some extent determine the unique character of the material. Therefore, intensity and color tone may vary slightly depending on the production batch.

More details can be found on our website.
