EPD Summary

Swisspearl Patina Inline NXT

Product information

Swisspearl Patina Inline NXT is a high quality, through-coloured fibre cement board and is intended to be used as façade board. Deemed as non-combustible, Swisspearl Patina Inline NXT is available in variable sheet sizes and is characterized by its linear milled grooves, that gives a 3D effect to the building. It is covered by a hydrophobation layer and is available in a large range of possible colours.

Functional unit and representativeness

This summary shows the results of the production and installation of 1 m² Swisspearl Patina Inline NXT. The results are representative for all colour variants of the Swisspearl Patina Inline NXT board as the environmental impacts related to the different colours do not significantly differ from each other based on the requirements outlined in the EN15804.

Main results

	Production phase A1-A3	Construction phase A4-A5	End-of-life phase C1-C4	Total Life Cycle A1-C4	End-of-life benefits D
 GWP - Total kg CO ₂ -eq/m ²	10,5	2,8	2,55	15,9	-0,23

Swisspearl Patina Inline NXT is available in 8/9,5 mm thickness. The area weight of the product is 14,2 kg/m². In order to calculate the environmental impact of 1 kg Patina Inline NXT, multiply the values by 0,07.

Further information

Validity date	Background database	Production location	EPD database	Registration number	Reference Service Life
31/12/2030	EcolInvent 3.6	Hungary	INIES	20231235936	50 years or higher according to the BBSR (code 335.511)

FAQ Product Sustainability

Swisspearl Patina Inline NXT

Disclaimer: All information given in this FAQ is valid at the date of publication.

What is the biogenic content in this product?

The biogenic content comes from cellulose fibers and is about 5-10%.

What is the recycled content in the product?

Swisspearl Patina Inline NXT does not contain pre- and post-consumer recycled materials.

Is material waste being recycled?

All cellulose used in the product is sourced from a PEFC and/or FSC certified supplier.

For more information, please contact epd@swisspearl.com

Are the cellulose fibres used FSC/PEFC certified?

Swisspearl has a chain of custody for all their cellulose fibres.

For more information, please contact epd@swisspearl.com

Does the product comply with the EU Taxonomy (DNSH criteria)?

Signed declaration can be found on our homepage.

Does the product contain any SVHC's in a concentration above 0,1% (w/w) or PFAS's?

The total concentration of SVHC's in the product does not exceed 0,1% (w/w). However, the synthetic fibres used for reinforcement contain more than 0,1% SVHC alone. As the fibres are encapsulated in the solid matrix of the product, and therefore non-separable, the presence of this substance poses no health risk upon handling. For more information, please contact sds@swisspearl.com.

The product does not contain any PFAS.
